Date: June 9, 1993

Job No. 7200-011

HDR

Transmittal

Transmittal To:

Name Bill Dunn

Firm City of Fresno, Water Division

Address 1910 E. University Ave.

City/State Fresno, CA 93703-2988

Transmittal From:

Name DAVE MURBACH Department 141

Autoattendant Number (916) 939-4100 Ext. 261

Bill:

Attached you will find:

1) two sample kits for Volunteer Nos. 21 and 63
2) extra copy of residential sample collection procedures
3) example sample activity form

Before distributing the sample kits, fill in the day and date you want to pickup the samples (at the top of the instruction sheet). After you drop off the sample kit to the address shown in the lower right-hand corner of the instructions, you will need to call the volunteer (if you don't see them at the door) to let them know that they need to sample the next morning and see if they have any questions. When you pickup the sample bottle you need to confirm that the number on the bottle matches the number on the instruction sheet label, confirm that at least six hours passed between the last time water was used and the time the sample was taken, and complete the label on the sample bottle with the date and time the sample was taken as well as the last name of the sampler. Before delivery of the sample bottle to the lab (BSK at 1414 Stanislaus St.), you need to fill out a sample activity form as shown on the example I sent.

The residential instruction form is generic and can be used at any time by filling out the date at the top of the page and placing an address label with the volunteer number in the lower right-hand corner. You may need to use this if there are any other homes that need to schedule their sampling before 6/21.

Please call me if you have any questions. Thanks.

Sample Activity Form

City of Fresno - Water Division, 1910 E. University Ave., Fresno, CA 93703

Fill out at BSK

Sampled by: Person delivering sample Relinquished by: _____ Date : ___/___/___ Time: ___ : ___ am pm

fill out sample date & time from bottle

Comments or Instructions:

PLEASE TAKE THIS WATER SAMPLE FOR CITY OF FRESNO'S WATER DIVISION TOMORROW MORNING ON _____, __/__/93.

IF YOU HAVE ANY QUESTIONS OR CANNOT TAKE THE SAMPLE FOR ANY REASON PLEASE CALL BILL DUNN AT 498-4136.

THANK YOU.

DIRECTIONS
RESIDENT TAP SAMPLE COLLECTION PROCEDURES

These samples are being collected to determine the contribution of faucet fixtures and household pipes and/or solder to the lead and copper levels in tap water. This sampling effort is required by the Environmental Protection Agency, and is being accomplished through the cooperation of homeowners and residents.

The collection procedure is described in detail below.

1. Do not use any water for 6-8 hours before sampling. The water department recommends that either early mornings or evenings upon returning home from work are the best sampling times to ensure that the necessary water conditions exist.

2. A kitchen or bathroom cold-water faucet is to be used for sampling. Place the open sample bottle below the faucet and gently open the cold water tap. Slowly fill the sample bottle to the base of the neck and turn off the water. It should take about 45 seconds to fill the bottle.

3. Tightly cap the sample bottle and place in the plastic bag provided. Fill in the information requested on the form below, sign the form, and place in the plastic bag along with the sample bottle. Please review the address label below at this time to ensure that all information contained on the label is correct.

4. Place the sample outside your home for pick-up by 9:00 in the morning.

5. Results from this monitoring effort will be provided to participating customers when reports are generated for the State.

Please call Bill Dunn at 498-4136 if you have any questions regarding these instructions.

TO BE COMPLETED BY RESIDENT:

PLEASE RETURN THIS SHEET WITH THE SAMPLE BOTTLE.

Water was last used: TIME:_____ DATE: _____

Sample was collected: TIME:_____ DATE: _____

I have read the above directions and have taken a tap sample in accordance with these directions.

Time Sampled : 0740
Date Received : 06/17/93
Report Issue Date: 06/30/93

Case Number : Ch931597
Lab ID Number : 1597
Project Number : None
Sample Description: L & C-1

Sample Type: LIQUID

Results of Analyses
EPA Lead and Copper Rule*

Compound	Method	Units	Results	DLR
Copper (Cu)...	EPA 200.7	mg/L	0.025	0.010
Lead (Pb).....	EPA 239.2	mg/L	0.0025	0.001
Turbidity.....	EPA 180.1	NTU	ND	0.1

KEY to ABBREVIATIONS

DLR: Detection Limit for the purposes of Reporting
mg/L: Milligrams per Liter
NTU: Nephelometric Turbidity Units

* The EPA Lead and Copper Rule includes several unique features. The sample is a "first draw" of a fixed volume (one liter). The turbidity analysis is performed after the sample is acidified with HNO_3. Reporting near the detection limit is as follows:

Copper: Values less than 0.01 mg/L are reported as **0** (zero); Values between 0.010 and 0.049 mg/L are reported as **0.025** mg/L; Values greater than 0.05 mg/L are reported directly.

Lead: Values less than 0.001 mg/L are reported as **0** (zero); Values between 0.0010 and 0.0049 mg/L are reported as **0.0025** mg/L; Values greater than 0.005 mg/L are reported directly.

QUICK MEMO

DATE: August 5, 1993

TO: WTH, DLT, WEB, DSK, DEP, WJD

FROM: MARTIN R. MCINTYRE MRM

SUBJECT: LEAD/COPPER SAMPLE RESULTS

As previously reported, our first round of sampling resulted in a 90th percentile lead value of 2.5 ppb- very good as the corrosion control optimization kicks in if the rise from source to tap is >than 5 ppb.

The Regulation required us to do a second round of sampling from the same taps six months later. Enter the accelerator of all chemical reactions- increased temperature. This second round collected in june/july resulted in a 90th percentile of 8 ppb, triggering a requirement to implement corrosion control optimization.

Given the 8 ppb results, the next step required by the regulation is a bench scale corrosion study. I have Discussed with HDR- they believe that there is a good chance that EPA will accept a "desk top" study which could demonstrate that the 8 ppb is equivalent to optimized corrosion control. The underlying assumption is that we can show that existing corrosion control programs in place elsewhere can't do any better than our existing condition. I'm reserving judgement on viability of this approach until after we meet with HDR- probably the week of Aug 15. Existing scope of work with HDR covers work through a bench scale corrosion study and includes the "desk top".

Bottom line- all is not well in the hinterland. May still dodge the corrosion control/lead bullet but its not assured.

From: Pat Nyasso
Subject: Lead + Copper Sample Taken From Pump Station # 86

A. Status of Well Prior Collection of Sample (Information From Don Burns)

- Well was off for 3 weeks for repairs
- Pump + Motor were pulled + repaired
- Well was super Chlorinated
- Acid was also added to Well casing
- Well ran for 5-10 minutes prior to collection of sample

B. Current Status of Well, Since Collection of First Sample

- Well is still not of line
- Has not passed Bac-T test
- Has Plate count of 3090
- Has been super chlorinated several times
- Metal flakes ~~spotted~~ seen during flushing

Note: Second sample may also not be valid due to chemical treatment prior to sample collection

Bill:

Attached is my schedule for activities next week. I plan to arrive at about 9:00 on Monday so that we can start delivering sample kits by 10:00. The schedule isn't all that rigid. I plan on getting back to your office between 3:30 and 4:00 each day so I can bring you up to speed.

Also I'd like to schedule a meeting for either 11:00 or 1:00 with you (and Martin, if he's not too busy) on Thursday so I can let you know what's left to be done of Friday.

Call me if you have any questions. Thanks.

Dave

* Arrive in Fresno by 9:30

** Meet at 11:00 if better, need to discuss work in remainder of week.

PLEASE TAKE THIS WATER SAMPLE FOR CITY OF FRESNO'S WATER DIVISION TOMORROW MORNING ON _____, __/__/93.

IF YOU HAVE ANY QUESTIONS OR CANNOT TAKE THE SAMPLE FOR ANY REASON PLEASE CALL BILL DUNN AT 498-4136.

THANK YOU.

DIRECTIONS
RESIDENT TAP SAMPLE COLLECTION PROCEDURES

The collection procedure is described in detail below.

1. Do not use any water for 6-8 hours before sampling. The water department recommends that either early mornings or evenings upon returning home from work are the best sampling times to ensure that the necessary water conditions exist.

2. A kitchen or bathroom cold-water faucet is to be used for sampling. Place the open sample bottle below the faucet and gently open the cold water tap. Slowly fill the sample bottle to the base of the neck and turn off the water. It should take about 45 seconds to fill the bottle.

3. Tightly cap the sample bottle and place in the plastic bag provided. Fill in the information requested on the form below, sign the form, and place in the plastic bag along with the sample bottle. Please review the address label below at this time to ensure that all information contained on the label is correct.

4. Place the sample outside your home for pick-up by 9:00 in the morning.

5. Results from this monitoring effort will be provided to participating customers when reports are generated for the State.

Please call Bill Dunn at 498-4136 if you have any questions regarding these instructions.

TO BE COMPLETED BY RESIDENT:

PLEASE RETURN THIS SHEET WITH THE SAMPLE BOTTLE.

Subject: City of Fresno - Lead and Copper Rule, First Round Monitoring Results - Preliminary Report.

Dear Patrick:

The intent of this letter is to transmit to you a summary of the results of the tap water sample analysis and the first set of source and distribution system water quality analysis. A final report detailing the results will follow after the results for the second round of water quality sampling are received. These results are expected by the middle of June.

The City of Fresno sampled tap water from 131 homes for lead and copper. All the homes were from a Tier 1-C sample pool. In addition to the above sampling, water quality samples were collected from 25 distribution system sites and eight pump stations identified as the source water for the residences sampled. The attached technical memorandum summarizes these results.

The City of Fresno will be conducting the second round of the initial tap water and water quality monitoring in late June 1993.

If you have any questions concerning these results please call me.

Very Truly Yours,

Dave Murbach

TECHNICAL MEMORANDUM
CITY OF FRESNO
LEAD AND COPPER RULE COMPLIANCE MONITORING
PRELIMINARY RESULTS OF INITIAL MONITORING - FIRST ROUND

The City of Fresno collected their first round of initial monitoring samples in compliance with the Lead and Copper Rule during April and May, 1993.

TAP WATER SAMPLE RESULTS

Table 1 presents the results of the tap water analysis for lead and copper. The City of Fresno sampled 131 single family residences that comprised a Tier 1-C sample pool. The table lists the lead and copper concentrations in descending order. This was done in order to determine the 90th percentile levels as required by the Lead and Copper Rule.

Lead Results

The 90th percentile lead level was determined by multiplying the number of samples taken by 0.9 (131 x 0.9 = 117.9). The 90th percentile lead level for the City of Fresno samples is 0.0025 mg/L which is below the EPA action level of 0.015 mg/L. It should be noted that the laboratory reports all analyzed lead values between 0.0010 and 0.0049 mg/L as 0.0025 mg/L.

Copper Results

The 90th percentile copper level was determined in the same way as for lead. The 90th percentile copper level for the City of Fresno is 0.43 mg/L which is below the EPA action level of 1.3 mg/L.

DISTRIBUTION SYSTEM AND POINT OF ENTRY SAMPLE RESULTS

Water quality analysis was performed on 25 distribution system locations and 8 points of entry to the distribution system. The results of this analysis are summarized in Tables 2 and 3. These results are the first set of two sets of sampling that will be performed in conjunction with the first round of initial monitoring.

The lead concentration of the source water was less than 0.001 mg/L at all sample locations.

FOLLOW-UP MONITORING

To comply with the requirements of the Lead and Copper Rule a second round must be conducted to complete the initial monitoring period. This second round of sampling will begin during the last week of June 1993.

Bill:

Attached is the letter that needs to go to the 130 residences sampled during the first round of sampling to inform them when the second round of sampling will occur.

In the past we've followed the steps below to get the letter sent out to the customers:

- Jeff and Martin review the letter and make any minor changes as needed
- The letter is retyped on the City's letterhead and signed by Martin
- The letter is sent back to HDR along with the City's envelopes
- HDR copies the original letter, creates the address labels, and mails out all the letters

In this case I will need at least 130 envelopes to mail these letters and if I get the original letter back by next Tuesday, they will all be mailed by June 2.

Call me if you have any questions. Thanks.

June 1, 1993

Dear Resident:

Thank you for participating in our lead and copper tap water monitoring program. The success of this program has been dependent upon people like you who volunteered to collect the residential tap water samples according to the requirements of the U.S. Environmental Protection Agency (EPA) for the Lead and Copper Rule.

A total of 130 tap water samples were collected from different residences in the City of Fresno's service area between April 21 and April 30, 1993. ~~A preliminary review of the analytical results from these samples shows that the results for both lead and copper are reassuringly very low~~. You will be receiving your individual results after we have completed the second round of lead and copper tap water monitoring.

The EPA Lead and Copper Rule requires a second round of monitoring to verify the initial results, and with your permission, we would like to receive another sample from your home during the week of June 21-25. We will be delivering sample bottles and instructions on Monday, Tuesday, and Wednesday of that week. Please follow the instructions again and collect the sample by the morning after you receive your sample bottle, if possible. If you will not be available during this week, please call Bill Dunn at 498-4136 so we can reschedule your sample collection for either the previous or following week for your convenience.

Thank you again for participating in our lead and copper monitoring program. If you have any questions or comments please call Bill Dunn at 498-4136.

Sincerely,

Martin R. McIntyre
Water Systems Supervisor II

Mr. Patrick Chan
U.S. Environmental Protection Agency
75 Hawthorne Street
San Francisco, CA 94105-3901

Subject: City of Fresno - Lead and Copper Rule Sampling Plan

Dear Patrick:

The City of Fresno initiated their first round of lead and copper monitoring the week of April 19, 1992.

Our material survey concluded that no Tier I-A, or Tier I-B sites could be located in the City of Fresno Service Area. We therefore included in the sampling pool Tier I-C sites only. The first round of samples will include 130 homes. Table 1 is a list of the homes sampled. The City identified eight wells, Table 2, which serve the areas sampled. These wells were sampled and will be analyzed for: lead, copper, pH, conductivity, calcium, alkalinity and temperature.

In addition, twenty five distribution system sampling sites, Table 3, were identified in and around the homes participating in the study for water quality monitoring. These stations were sampled and will be analyzed for: pH, conductivity, calcium, alkalinity and temperature.

Source water quality and distribution system quality will be sampled again in mid-May to comply with the Lead and Copper Rule monitoring requirements.

The City will initiate the second round of sampling the last week of June. We should have all the samples to the laboratory by July 11, 1993. A copy of our sample plan is included for your review.

As soon as we receive the results from the laboratory, we will prepare a report which summarizes the results. A copy of the report will be sent to you and to the California Department of Health Services.

HDR Engineering, Inc.

SAMPLE PLAN
INITIAL MONITORING

FIRST DRAW TAP SAMPLES

The initial monitoring period consists of two consecutive 6-month sample periods during which the water is sampled from the homeowner's tap and analyzed for total lead and copper. The first set of these samples is to be collected between April 20 and 30, 1993. The second set of samples is expected to be collected in July 1993.

A minimum of 100 samples must be taken for each set. Table 1 presents a list of 136 homeowners that volunteered to collect samples at their tap. The instructions the homeowner will use to collect the samples are presented in Figure 1. An attempt should be made to hand deliver the sample bottles and demonstrate the sampling technique to as many homes as possible. Also, the presence of lead solder and copper pipe must be verified in 10-15% of the homes before the first set of samples can be taken.

The sample collection procedures will follow all EPA Guidelines in the Lead and Copper Rule. Some of the important sampling criteria include:

- The sample must be collected from a kitchen or bathroom tap.
- The water must stand in the pipes for at least 6 hours before the sample is collected.
- The sample must be a first-draw collection.
- The sample must be 1 liter in volume.

Sample kits should be prepared which include a 1 liter polyethylene sample bottle and written instruction (which includes a chain of custody form). The sample kits should be assembled in a 1 gallon plastic bag. Prior to delivery of the sample kits a label should be placed on each set of written instructions that includes the sample number and the

address. This sample number must also be entered on the sample bottle label.

The sample kits will be delivered to homeowners in person, if available, after again ascertaining that the home has copper plumbing. The homeowner will be instructed in taking the sample and how to fill out the chain of custody. Sample kits can be left at a homeowners doorstep if they cannot be reached in person. A follow up call to these homeowners should be made to make sure they understand the instructions.

The residents will then collect the sample and leave the sample bottle outside their home for pick-up the next morning. HDR and City Staff will pick-up the samples, verify that the sample number matches the address, and deliver the samples to BSK Laboratories, Inc. for analysis (see table below). A chain of custody must be filled out for all samples before delivery to the laboratory.

Lead and Copper Analytical Methods

Compound	EPA Method	Units	DLR*
Copper	200.7	mg/L	0.010
Lead	239.2	mg/L	0.001

* Detection limit for the purposes of reporting

QA/QC samples will be given to the laboratory along with the homeowner's samples. These samples will include spiked samples with a known concentration of lead, blank samples of distilled water, and duplicate samples split from spiked samples. These samples will represent approximately 10% of the total samples collected.

SOURCE WATER SAMPLES

The initial monitoring period consists of two consecutive 6-month sample periods during which the water is sampled from the well system. These samples are analyzed for lead, copper, pH, conductivity, temperature, alkalinity, and calcium. The first set of these samples is to be collected between April 20 and 30, 1993 along with the first draw tap samples. The second half of this set of samples is expected to be collected the week of May 17, 1993. The second set of samples will be collected the weeks of June 20 and July 12, 1993.

The source water for each first draw sample site must be sampled. Table 2 presents a list of eight well sites which are in the same general area as the first draw tap sample sites.

To collect the well samples, first flush the sample tap. Then collect a sample for field analysis of pH, temperature, and conductivity. Record the field measurements on a log sheet including the date, time, and location of sample. After performing the field analysis, collect the samples for lead, copper, alkalinity, and calcium in sample bottles provided by BSK Laboratories. Cool the samples for calcium and alkalinity to 4° C, label the bottles with the sample location, complete a chain of custody form for these samples, and deliver them to the laboratory within 24 hours for analysis (see table below).

Source Sample Analytical Methods

Compound	EPA Method	Units	DLR*
Copper	200.7	mg/L	0.010
Lead	239.2	mg/L	0.001
Calcium	200.7	mg/L	0.1
Alkalinity	310.1	mg/L as $CaCO_3$	1.0

* Detection limit for the purposes of reporting

DISTRIBUTION SYSTEM SAMPLES

The initial monitoring period consists of two consecutive 6-month sample periods during which the water is sampled twice from the distribution system. These samples are analyzed for pH, conductivity, temperature, alkalinity, and calcium. The first set of these samples is to be collected between April 20 and 30, 1993 along with the first draw tap samples. The second half of this set of samples is expected to be collected the week of May 17, 1993. The second set of samples will be collected the weeks of June 20 and July 12, 1993.

A minimum of 25 samples must be taken for each set. Table 3 presents a list of 25 coliform sample sites which are in the same general area as the first draw tap sample sites.

To collect the distribution system samples, first flush the sample tap as you would to collect a coliform sample. Then collect a sample for field analysis of pH, temperature, and conductivity. Record the field measurements on a log sheet including the date, time, and location of sample. After performing the field analysis, collect the samples for alkalinity and calcium in sample bottles provided by BSK Laboratories. Cool the samples to 4 C, label the bottles with the sample location, complete a chain of custody form for these samples, and deliver them to the laboratory within 24 hours for analysis (see table below).

Distribution System Sample Analytical Methods

Analysis	EPA Method	Units	DLR
Calcium	200.7	mg/L	0.1
Alkalinity	310.1	mg/L as $CaCO_3$	1.0

* Detection limit for the purposes of reporting

FIGURE 1. Fresno Lead and Copper Rule Homeowner Sampling Instructions

PLEASE TAKE THIS WATER SAMPLE FOR CITY OF FRESNO'S WATER DIVISION TOMORROW MORNING ON _____, __/__/93.

IF YOU HAVE ANY QUESTIONS OR CANNOT TAKE THE SAMPLE FOR ANY REASON PLEASE CALL BILL DUNN OR JEFF MURRAY AT 498-4136.

THANK YOU.

DIRECTIONS
RESIDENT TAP SAMPLE COLLECTION PROCEDURES

These samples are being collected to determine the contribution of faucet fixtures and household pipes and/or solder to the lead and copper levels in tap water. This sampling effort is required by the Environmental Protection Agency, and is being accomplished through the cooperation of homeowners and residents.

The collection procedure is described in detail below.

1. Do not use any water for 6-8 hours before sampling. The water department recommends that either early mornings or evenings upon returning home from work are the best sampling times to ensure that the necessary water conditions exist.

2. A kitchen or bathroom cold-water faucet is to be used for sampling. Place the open sample bottle below the faucet and gently open the cold water tap. Slowly fill the sample bottle to the base of the neck and turn off the water. It should take about 45 seconds to fill the bottle.

3. Tightly cap the sample bottle and place in the plastic bag provided. Fill in the information requested on the form below, sign the form, and place in the plastic bag along with the sample bottle. Please review the address label below at this time to ensure that all information contained on the label is correct.

4. Place the sample outside your home for pick-up by 9:00 in the morning.

5. Results from this monitoring effort will be provided to participating customers when reports are generated for the State.

Please call Bill Dunn at 498-4136 if you have any questions regarding these instructions.

TO BE COMPLETED BY RESIDENT:

PLEASE RETURN WITH SAMPLE.

City of Fresno, Water Division

First Round Initial Monitoring Status

- 130 samples taken
- 126 analyzed to date
- 90th percentile levels for lead (0.0025mg/L) and copper (0.42 mg/L)
- last four samples taken on 5/12-13 and results should be available soon
- only one sample above 11ppb lead at 37ppb

Results to Consumers

- example letter prepared
- letter is individual to each consumer, need to get Fresno letterhead to print the letters, signatures?

Results to EPA

- preliminary summary report drafted for Patrick Chan
- final detailed report after water quality analysis finished for first round of monitoring program (mid-June)

Future Monitoring

- Second water quality samples for first round of initial monitoring during this week (distribution and pumping station sites only)
- Second round of initial monitoring during week of June 21
- Second water quality samples for second round of initial monitoring during week of July 12 (distribution and pumping station sites only)

Materials Survey

- Draft Technical Memo No. 1
- Summarizes and documents the activities of the material survey to the point where the addresses 538 potential Tier 1 sample sites are presented and 162 volunteers from these sites were solicited
- Missing letter from City's distribution department stating that lead lines are replaced as found and the neighbors homes are checked, no known lead lines exist, and when was the last time lead lines were found
- Missing letter from the City to homes initially accepted into the monitoring program but were found to have no lead solder upon field testing

Sampling Plan

- Draft Technical Memo No. 2
- Summarizes the procedures used to select the tap water sample sites as well as the water quality sample sites; procedures for collecting each type of sample and the analysis that must be performed is also included

Report Presentation Format

- In a single binder with the following potential divisions:

  Material Survey
  Sampling Plan
  First Round Initial Monitoring Results
  Second Round Initial Monitoring Results
  Followup Monitoring Results
  EPA / DHS Correspondence

819 water systems found high in lead

■ Unacceptable amounts reported in supplies that serve 30 million people.

By Rudy Abramson
Los Angeles Times

WASHINGTON — Unacceptable amounts of lead have been detected in the public water supplies of 819 medium-sized and large American communities, which together serve 30 million people, the Environmental Protection Agency reported Tuesday.

The levels were monitored in residences in those areas deemed to be at high risk for lead contamination and do not represent average amounts for those water systems, the EPA cautioned. Nevertheless, agency officials said they were "very concerned" over the continuing threat of lead in water supplies, as well as in the air, soil and paint.

Carol Browner

Under federal regulations, when lead in public water exceeds 15 parts per billion, officials must take steps to control water pipe corrosion, teach the public how to minimize the hazard and continue monitoring the supply.

"The reduction of children's exposure to lead is one of EPA's top priorities," EPA Administrator Carol Browner said. "While systems with elevated levels are required to reduce their lead levels through corrosion control measures, there are also important steps that consumers can take to help prevent exposure and increase safety."

Exposure to lead contamination is particularly damaging to infants and children — impairing hearing and eyesight and causing brain damage. It is estimated that one child in every six has elevated levels of lead in the blood. While officials say the source of greatest concern is house paint, about 20 percent of cases are attributed to water supplies.

According to the study made public Tuesday, lead levels as high as 484 parts per billion were recorded at the Marine Corps' Camp Lejeune at Hadnot Point, N.C.

For the most part, the excessive levels were found in systems in the East, which tend to be older and in which lead was used to seal pipe joints.

Altogether, samples from 7,500 water systems have been analyzed. But James Elder, director of the EPA's office of ground water and drinking water, said 1,100 systems failed to conduct required monitoring, leaving them liable for $5,000 federal fines.

Results of the initial survey of big-city systems — those serving more than 50,000 customers — were made available in October. Since then, Elder said, many have begun to reduce levels.

The local story

Fresno is about halfway through a test sampling for lead content in city water, according to Martin McIntyre, city water quality chief.

He said the results so far have been well within the limits set by the Environmental Protection Agency. Fresno has not had problems with lead in city water, he said.

Tests are being conducted in accordance with EPA requirements, which include sampling water in the homes of customers. The corrosive action of water in delivery pipes is a common cause of lead in the water, McIntyre said.

Contamination has been a problem with city wells, however. More than 40 wells have been shut down since 1989 because agricultural contaminants were discovered.

TABLE 3. FRESNO LEAD & COPPER RULE DISTRIBUTION SYSTEM SAMPLE LOCATIONS

Distribution System Sample Number	Distribution System Location Number		Date Sample Taken	Address	Associated Pump Station Number
1	79	5/24	5/3	(b) (6) [redacted]	91

Meeting Minutes

Location: City of Fresno Water Division Offices

Subject: Lead & Copper Rule Compliance Monitoring Project Status

NOTE: BOLD TEXT INDICATES ACTION ITEMS

I. STATUS OF FIRST ROUND OF INITIAL MONITORING PROGRAM

a. Tap Samples

- 130 samples were collected and 126 have been analyzed to date (the last four samples were collected on 5/12 and 5/13 and results are not yet available).
- The 90th percentile level for lead is 0.0025 mg/L.
- The 90th percentile level for copper is 0.42 mg/L.
- These results are well below the EPA action levels of 0.015 mg/L for lead and 1.30 mg/L for copper.
- Only one sample had a lead concentration greater than the action level (0.037 mg/L). Jeff M. collected a duplicate sample this morning to verify this high level. The resident also told Jeff that they had no new faucets.
- An example letter that will transmit the individual sample results to each resident in the monitoring program was presented and discussed. It was decided to hold off sending the results until the second round of sampling was complete. **HDR will change the letter to incorporate the results of both sampling events as well as bolding the residence's results and highlighting the statement that the overall results are very low.**

b. Distribution System and Source Samples

- 25 distribution samples and 8 source samples were collected and the results of about 2/3 of them have been received to date.

- The results show that there was no detectable lead in the source samples.

- Jeff is completing the second half of the distribution system and source sampling this week. These results are expected in mid-June and are the last samples that need to be taken for the first round of the initial monitoring program.

c. Results to EPA

- A draft letter and technical memo for Patrick Chan (EPA) was presented that summarizes the results of the first round of sampling that has been completed to date. The technical memo will be updated and reissued when the results of the second distribution system and source sampling are received. There were no comments on the draft letter so HDR will issue the letter and technical memo to EPA as soon as the last four tap sample results are received.

II. SECOND ROUND OF INITIAL MONITORING PROGRAM

a. Scheduling

- The tap water sampling for the second round is scheduled to start on June 21 and the majority of the samples should be collected by June 24.

- The first half of the distribution system and source water sampling should also occur during the week of June 21.

- The second half of the distribution system and source water sampling should occur three weeks later during the weeks of either July 12 or July 19.

b. Resident Notification

- **HDR will prepare a letter to the 130 homes sampled during the first round which notifies them of the dates for the second round of sampling. After the City's review and preparation of an original letter, HDR will make copies and send the letters.**

III. MATERIALS SURVEY AND SAMPLING PLAN

a. Materials Survey

- HDR presented a draft technical memo for the City's review which summarizes the activities of the materials survey and how the tap water sample sites were located.

- The technical memo is missing a letter from the City's distribution department (to the production department) that states that no known lead lines exist, lead lines are replaced as they are found and the neighborhood is checked for additional lead lines, and when was the last time lead lines were found (if someone can recall). **Bill B. said he would make sure the letter was written.**

b. Sampling Plan

- HDR presented a draft technical memo for the City's review which summarizes the procedures used to collect and analyze the tap water, distribution system, and source water samples.

IV. GENERAL ITEMS

a. Report Presentation Format

- Perri S. suggested that HDR prepare a binder in which all reports, sampling results, and EPA correspondence would be contained. The binder would have sections for the following items:

  Materials Survey
  Sampling Plans
  First Round Initial Monitoring Results
  Second Round Initial Monitoring Results
  Follow-up Monitoring Results
  EPA/DHS Correspondence

- Three copies of this binder will be prepared for the City along with one copy each for EPA and DHS.

Subject: **City of Fresno - Lead and Copper Rule, Preliminary Report of Second Round Monitoring Results**

Dear Patrick:

The intent of this letter is to transmit to you a preliminary summary of the tap water sample analysis results and the first set of water quality analysis results. A final report detailing these results will follow after the second round of water quality analysis is complete. The second round of samples were collected between July 20 and 22, and the results are expected near the end of August.

The City of Fresno sampled 130 of the 131 residences in their Tier 1-C sample pool for lead and copper. The one sample not collected was from a vacant residence. In addition, water quality samples were collected from 25 distribution system sites and 7 pump stations that were identified as the source water for the residences sampled. The attached technical memorandum summarizes all of these results.

If you have any questions concerning these results, please call me at 916-939-4100.

Very truly yours,

P. Standish-Lee

Perri Standish-Lee
Vice President

CITY OF FRESNO, WATER DIVISION
LEAD AND COPPER RULE COMPLIANCE MONITORING
RESULTS OF INITIAL MONITORING - SECOND ROUND
TECHNICAL MEMORANDUM

TAP WATER SAMPLE RESULTS

Table 1 presents the results of the tap water analysis for lead and copper. The table lists the lead and copper concentrations in descending order. This was done in order to determine the 90th percentile levels as required by the Lead and Copper Rule.

Lead Results

The 90th percentile lead level was determined by multiplying the number of samples taken by 0.9 (130 x 0.9 = 117). The 90th percentile lead level for the City of Fresno samples is 0.008 mg/L which is below the EPA action level of 0.015 mg/L.

Copper Results

The 90th percentile copper level was determined in the same way as for lead. The 90th percentile copper level for the City of Fresno is 0.43 mg/L which is below the EPA action level of 1.3 mg/L.

DISTRIBUTION SYSTEM AND SOURCE SAMPLE RESULTS

Water quality analysis was performed on 25 distribution system locations and 7 points of entry to the distribution system. The results of this analysis are summarized in Tables 2 and 3. These results include both sets of sampling that were performed in conjunction with the first round of initial monitoring.

The lead concentration of the source water was less than 0.001 mg/L at 6 of the 7 sample locations. At W-KVDS, lead was detected in the water quality samples and reported at 0.0025 mg/L. It should be noted that the laboratory reports lead levels between 0.001 and 0.0049 mg/L as 0.0025 mg/L.
